

HYPER YIELDING CROPS – RESULTS AND AWARDS (SA)

What did we learn in year one? Which award paddocks came out on top and why?

Thursday 17th June 2021 6.30pm – 9.00pm including supper
The Gallery, Civic Centre, George Street, Millicent SA

The aim of this meeting is to provide you with the first year's results from the GRDC's Hyper Yielding Crops Research trials conducted at FAR Australia's Crop Technology Centre, Millicent followed by a brief introduction to the HYC Awards, report interpretation, potential yield calculation followed by Q&A on lessons learnt in 2020. Finally presentations to the project's inaugural HYC award winners.

- **HYC Awards – regional winners to be announced at the meeting.**
- Elite germplasm screening trials in the SA HRZ – did we identify canola and cereal candidates that reliably outperformed our current standards in terms of the disease resistance, standing power and yield?
- HYC G.E.M. (Genotype. Environment. Management) trials - what management package combinations (winter vs spring germplasm, N, PGR's and Fungicide) have delivered the highest final harvest dry matters, harvest indices, grain yields and profit over the last three years in lower SE?
- Is it possible to make barley yield as high as wheat in the lower SE?
- What level of fungicide input maximised margins for cereal germplasm sown in mid-April and mid-May?
- How were HYC entry crops benchmarked against each other in the 2020 Award's programme?

Nick Poole, FAR Australia's Managing Director will be joined by project colleagues Kat Fuhrmann, Aaron Vague, Dr Kenton Porker (FAR Australia), Jon Midwood (Techcrop), Jen Lillecrapp (MacKillop Farm Management Group) and Amanda Pearce (SARDI).
